SUMMARY

Product Designer with 3+ years shipping enterprise B2B SaaS in cybersecurity and HR-tech. Specialised in turning admin-heavy, support-dependent workflows into self-serve systems. Designs with AI in the loop, using it to accelerate exploration while keeping authority and judgment with the user. Comfortable owning a product from problem definition through launch with product, engineering, and customer success.

CORE CAPABILITIES

- Complex B2B workflow design, information architecture, and end-to-end product flows
- AI-assisted design for production: GenAI-driven campaign creation, content generation, and reporting with deliberate human-decision checkpoints
- Data-driven dashboard and analytics design focused on decision-making, not data display
- Design systems, prototyping (Figma, Cursor), usability testing, accessibility
- Cross-functional collaboration with Product Management, Engineering, and Customer Success

EXPERIENCE

Infosec Ventures — Product Designer

Jul 2024 – Present | Web-based B2B SaaS used by enterprise security teams

- Led end-to-end design of Human Firewall 3, evolving a 10-year-old security platform into an AI-native risk intelligence system used by enterprise security teams
- Unified phishing simulations, LMS training, and risk reporting into one product, replacing a 7-tab manual workflow with an AI-assisted, self-serve flow that reduced customer-success dependency on launches
- Designed the AI-assisted campaign creation flow with deliberate human checkpoints (automation prepares, admins approve), preventing 10,000-recipient sends from becoming background actions
- Redesigned the risk score from a single number into a structured radar across Behaviour, Training, and Role Sensitivity, giving admins a reason and a place to intervene
- Rebuilt the admin dashboard around decisions, not data display, surfacing action hotspots and department performance, and lifted admin engagement by 48%
- Partnered with Product and Customer Success on the HF2 to HF3 migration, where two systems ran in parallel for a shared customer base without confusion
- Led design for eCrime Hub, a public-facing cybercrime reporting platform for Dubai Police, working within government brand and accessibility constraints to ship a three-tier visual system that scales to large content volumes without redesign

TexlaCulture — Product Designer

Mar 2023 – Jun 2024 | HRMS SaaS

- Designed the first end-to-end version of TexlaCulture's HRMS, a multi-module, scalable SaaS spanning onboarding, hiring, attendance, LMS, and performance management, used by 8,000+ employees across 12 customers in the first year
- Restructured a 4-section, 40+ module navigation into a mode-based system (Employee, HR, Admin) with pinning and search, reducing time-to-task for admins
- Reworked the onboarding journey and in-product guidance, increasing completion rates by 52% and reducing repetitive questions reaching HR
- Built and shipped the design system spanning web and mobile components, handed over to engineering as the source of truth for cross-platform consistency
- Ran usability testing with the first three live customers and used findings to fix learnability and error-rate issues before broader rollout

SKILLS

Design: Interaction design, information architecture, design systems, prototyping, usability testing, accessibility, visual design

Product: Problem framing, prioritisation, qualitative and quantitative research synthesis, cross-functional collaboration, stakeholder management

Tools: Figma, Cursor, Claude, ChatGPT, Perplexity, NotebookLM, Lovable, Jira, Notion

Domains: Cybersecurity (phishing simulation, security awareness training, risk scoring), HR Tech (HRMS, onboarding, LMS, performance), Public Sector / Government, Enterprise B2B SaaS, AI-augmented workflows

EDUCATION

University of Delhi — B.A. (Hons) English | Jun 2020 – Jun 2023

Coursera — Google UX Design Specialisation | Nov 2022 – Feb 2023
