

NEHA CHHILLAR

Product Designer. First designer at two companies. I design AI-native products end to end, and I build.

Gurgaon, India | nehachhillar07@gmail.com | [+91 8287233848](tel:+918287233848) | nc-designs.vercel.app | linkedin.com/in/neha-chhillar

SUMMARY

Three years designing AI-native B2B SaaS, as the first and only product designer at both companies I've worked for. I specialize in human-in-the-loop AI: deciding where the system acts and where a person keeps authority, and making that visible enough that people trust it. Most recently I led the rebuild of a 10-year-old security platform serving 100+ enterprise clients, now in beta with 10 clients migrated and admin engagement up 48%, and I build front ends in Claude Code and Cursor, writing code that engineering ships.

WORK EXPERIENCE

Product Designer, Infosec Ventures | Gurgaon, India | Aug 2024 – Present

- Shipped the beta of Human Firewall 3, the AI-native rebuild of a 10-year-old enterprise security platform serving 100+ clients, as the only designer, with 1 product manager and 8 engineers: 10 enterprise clients migrated, feature and bug escalations down roughly 20% over six months of beta.
- Increased admin engagement with campaign analytics 48%, measured over six months of beta against the legacy platform, by redesigning dashboards around clear funnel metrics (sent, opened, clicked, compromised, trained) and rebuilding an opaque single-number risk score into a multi-factor vCRO radar (Behavior, Training, Role Sensitivity).
- Cut campaign launch time from hours to minutes by designing AI-assisted phishing simulation creation with a human approval layer: automation prepares the campaign, admins retain authority over what goes out.
- Lifted report adoption among client security admins 32% by redesigning the reporting layer around multiple formats (one-page email summary, PDF, CSV, Excel, detailed tables), and designed a gamification model that rewards positive behavior while keeping individual failure private.
- Designed a flashcard micro-learning builder that ships training to any LMS and built its front end in Cursor with Claude; engineering used it as the base for the production build. Built additional platform modules and marketing sites the same way.
- Built and maintained the platform's design system (component library, design tokens, auto layout, variables in Figma) with documentation and design QA alongside engineering through implementation.
- Drew 50,000+ visitors in week one and 10,200 chatbot-initiated reports in its first months for eCrime Hub (ecrimehub.gov.ae), a public cybercrime reporting platform for Dubai Police, by owning its design end to end, including a conversational reporting chatbot usable by non-technical citizens.

UX Designer, TexlaCulture | Gurgaon, India | Mar 2023 – Aug 2024

- Delivered the first end-to-end version of an HRMS adopted by 8,000+ employees across 12 enterprise clients in year one, as founding designer, by designing onboarding, hiring, attendance, LMS, and performance flows from scratch.
- Increased onboarding completion 52% by reworking the flow and in-product guidance.
- Simplified a workflow spanning 4 sections and 40+ modules by restructuring navigation into a mode-based information architecture (Employee, HR, Admin) with pinning and search, and built the web and mobile design system from scratch as the single source of truth for developer handoff.

PROJECTS

unsaid, Solo Designer and Builder | unsaidnow.vercel.app | Next.js, Supabase

- Designed and built a live consumer app solo, from concept, UX, and interaction design through build and deployment, using Claude Design and Claude Code.

SKILLS

- **Craft:** Information Architecture, User Research, Usability Testing, Interaction Design, Design Systems and Tokens, Interactive Prototyping, Data Visualization, UX Writing, Accessibility (WCAG), Design QA, Developer Handoff
- **AI:** Human-in-the-Loop Design, Conversational UI and Chatbot Design, AI-Powered Experiences, Front-End Building with Claude Code and Cursor
- **Tools:** Figma, Cursor, Claude Code, Claude Design, ChatGPT, NotebookLM, Jira, Notion

EDUCATION AND CERTIFICATIONS

- University of Delhi, Bachelor of Arts (Honours), English | Jun 2020 – Jun 2023
- Google UX Design Specialization, Coursera | Feb 2023; shipped my first enterprise product within 8 months of certifying
